

SELECT

Select is an international brand of spin fishing tackle established in 2014. It is known for its efficient tackle, stylish design and outstanding value for money. Select has everything you need to catch a predator: spinning rods, reels, custom lures, braids, hardware, tools, and accessories. All tackle is developed and tested by professional fishermen and sportsmen. The brand destroys the stereotype that quality fishing should be expensive. Catch desired trophies and show off your gear with Select.

Sprint

A line of short, all-purpose ultralight rods for predatory fishing on small rivers and lakes. These rods are designed for fishing at a relatively close distance and will be most effective in conditions with not enough space to swing the rod before casting. The Select Sprint has a medium-fast action and is perfect for fishing with micro spoons and small cranks. It's what you need for catching perch and chub in small rivers and streams. As a matter of fact, this kind of rod is perfect for catching trout, or it can be a great first fishing rod for a kid. The rod is made of 24T carbon fiber, equipped with high-quality guides and a comfortable handle. It has a modern design and, thanks to a carefully thought-out and efficient blank with a reinforced butt section, Sprint will easily handle large trophy fish. The rods in the series are distinguished not only by different parameters, but also by colors.

Sprint Solid

NEW

A specialized series of solid-tip rods designed for fishing with light SUL and XUL-class lures. Unlike the base Sprint model, this series features a 30 cm solid carbon tip, which makes casting and animating the smallest lures much easier and ensures minimal resistance during cautious bites from passive fish.

Glam

NEW

The Select Glam spinning series stands out among budget-level rods. If you're looking for a rod that instantly draws attention and delivers a stylish, premium look, Glam is made for you. The focus here is on modern design and strong visual appeal. Beyond its eye-catching appearance, Select Glam is equipped with a well-tuned blank featuring Fast Action and solid sensitivity, giving you confident and predictable lure control. The series is universal and available in popular lengths 2.1-2.4 m with casting weights up to 35 g. These rods are an excellent choice for a wide range of spinning techniques targeting perch and pike in almost any conditions, meeting the needs of most anglers.

Reflex

The latest budget-friendly rod from the Select brand. With a rod blank of 24T modularity, it is fast enough to be used for fishing with a jig and performing high-quality hooking. The range of Reflex rods is not very wide, but you will find a rod to use for most typical conditions. For example, for fishing from the bank or boat, for soft lures and hard bait fishing and twitching.

Force

Fast, light and balanced rod. It has a strict modern minimalistic design in matte black, its blank is manufactured from a combination of two types of Carbon – 24T and 30T. The split grip handle is made out of EVA material. Guides are shaped to prevent line entanglement and are also equipped with ceramic inserts. For better visual control of the tracing the tip winding is bright orange color. The spinning rod has decent sensitivity to be able to feel the bottom with the lure, and it also provides a good casting so you can reach the fish stock.

Force Long Distance

Select Sprint PE 4x is a four-strand braided line designed to shake up the budget segment of micro-jig and ultralight fishing. It's built for situations where an ultra-thin diameter and high sensitivity make all the difference. Sprint has a clean, tightly braided profile and keeps a true round shape instead of a flat one – something you can both see and feel. Thanks to its base coating, the line becomes smoother, which significantly improves casting distance, even with the smallest lures.

Ritmix

Select Ritmix is a budget-friendly ultralight rod designed for micro-jig fishing, available in both solid-tip and tubular-tip versions depending on the model. The series delivers an excellent balance between price and performance, providing a highly capable tool at an accessible cost. The blank is relatively stiff along its length, while the tip section is noticeably softer. This construction makes it easy to animate the smallest lures and visually track bottom contact and subtle bites. The rod is equipped with modern, streamlined guides, which become increasingly compact toward the tip to ensure proper blank performance. The split EVA handle pairs well with the classic screw-type reel seat, offering a comfortable and secure grip.

All-round. An all-purpose rod with great balance and fast action created for fishing with soft lures, as well as other types of lures. The short model can also be used for twitching small minnows and topwater lures. The rod is designed in a strict classic style with a handle made of dense EVA material.

Ritmix Travel

NEW

An affordable and compact spinning rod consisting of 6 sections, making it extremely convenient for transportation. With its fast action, it is well-suited for various types of lures. The Ritmix Travel series includes models with both solid and tubular tips, allowing you to choose the option that best fits your fishing style. The blank is made of 24T carbon, offering a balance between sensitivity and strength. TiO₂ insert guides are arranged using KR-concept technology for optimal load distribution. A reliable VSS reel seat ensures a comfortable grip. For easy transportation, the spinning rod comes with a hard plastic tube that provides additional protection.

Zander

The Zander model works great for catching zander, large perch, and pike with soft lures using classic jig techniques. The rod is stiff and fast, while the tip is equipped with a carbon insert, which provides better control in demanding conditions. It performs well with heavy rigs such as drop-shot setups, allowing delicate manipulation of small lures away from the weight. The Zander rod is also suitable for fishing near snags and for intentionally targeting larger fish with relatively small lures, where lighter tackle and precise control are required. At the same time, the powerful blank ensures a solid strike and reliable hook-setting, combining sensitivity with a strong power reserve.

Reflex 26

NEW

An all-purpose affordable spinning reel that looks stylish and meets all the basic requirements for fishing in our conditions. The Reflex body and rotor are made of special durable plastic, the spool is metal and, depending on the modification, may be deep or shallow. The reel has a light and smooth rotation and is quite good at laying braided lines. This model is equipped with an instant anti-reverse stop and has a finely tuned drag. The number of ball bearings is 4+1, and they are all installed only in the most necessary places. It is worth noting that the largest size of 4000 has a gear ratio of 4.6:1, this model is more powerful. Other sizes have a gear ratio of 5.2:1. The Reflex reel will be a great asset for the spinning rod of the same name.

Stellar

NEW

The Select Stellar reel is designed for the most demanding types of spinning techniques, such as ultralight, micro-jig, and area trout fishing. This model sets a new standard among budget-level reels, as the requirements in these conditions – especially when working with the thinnest lines in still water – are extremely high. The key advantage of Stellar is its exceptional line lay, ensured by the worm shaft mechanism and smooth oscillation movement. This combination delivers perfect line distribution, which is unique for this budget class. The reel's body and rotor are made from a carbon composite, allowing it to achieve one of the lowest weights in its class (starting from 150 g).

Force

Spinning reel with a low gear ratio (4.8:1), offering smooth and powerful retrieve. The internal mechanism is built for reliability and durability, supported by 6 ball bearings and 1 roller bearing. The line roller is fitted with two bearings to reduce friction and ensure even line lay. The aluminum spool features a tapered front lip, helping to achieve long-distance casts. The metal handle is screwed directly into the drive gear shaft, providing maximum structural rigidity. The reel is available in models with both deep and shallow spools, allowing anglers to choose the best option for various fishing conditions.

Ritmix

A modern affordable reel that matches perfectly with Ritmix spinning rods or similar rods of UL to ML class. The reel fully meets the essential requirements of a fishing enthusiast. It has smooth rotation and works well with braided lines. Its body and rotor are made of reliable and durable material. The reel has a nice metal spool with a slanted rim. The handle is also made of metal, has a comfortable knob and is screwed directly into the drive gear.

Master

An affordable versatile spinning reel for fishing with rods from UL to ML class. It is suitable for fishing with soft lures and jig head, as well as with spoons and wobblers. The Select Master has a modern design, smooth action, works well with braided lines and has a 4+1 bearing. The reel is available in four sizes and, depending on the modification, the spool can be either deep or shallow.

Chrome

A modern spinning reel for true aesthetes. It has a smooth reel action and lays braided lines evenly. The reel has 6 ball bearings and 1 roller bearing, 2 of which are in the line roller. The spool is aluminum, with a beveled front edge. The metal handle is screwed into the axis of the drive gear, which ensures a tight connection and minimizes backlash, and the absence of a reverse switch makes the reel design simpler and, accordingly, more reliable. The Select Chrome lineup is available in 4 sizes, depending on the modification, have deep and shallow spools.

Basic PE 8x

Versatile eight-strand line with an excellent price-performance ratio. The fibers are manufactured from modern material – high-modulus polyethylene (Dyneema), woven into a braid, which has a maximum circular overlap and outstanding smoothness. As a result, the line is very strong, soft, easily flies out of the reel spool, is highly informative and resistant to abrasions. Recommended for those types of fishing, where far casting distance and sensitivity are required, e.g. in spinning rod or feeder fishing.

Sprint PE 4x

NEW

Select Sprint PE 4x is a four-strand braided line designed to shake up the budget segment of micro-jig and ultralight fishing. It's built for situations where an ultra-thin diameter and high sensitivity make all the difference. Sprint has a clean, tightly braided profile and keeps a true round shape instead of a flat one – something you can both see and feel. Thanks to its base coating, the line becomes smoother, which significantly improves casting distance, even with the smallest lures.

Master PE 4x

The Select Master PE is a four-strand braided line made from Japanese polyethylene (PE). The line has a firm structure, offering high abrasion resistance and excellent tensile strength. Positioned in the affordable segment, it's a versatile option for general use. The Select Master PE is recommended for tough fishing conditions – medium and heavy jigging in snaggy areas, trolling, or as a shock leader for feeder fishing.

Fluorocarbon leader wire

Produced from high quality fluorocarbon Hi Seas (USA), resistant to abrasion, does not change its properties at temperatures from -40 °C to +160 °C. Fluorocarbon leader is almost invisible in the water, because it has the same coefficient of fracture. This makes it irreplaceable when fishing for cautious fish in clear waters.

Leader wire string NO. 1 and NO. 2

Manufactured from unique dark-colored material (Stainless Steel Single), developed and produced by AFW (USA). Its elasticity, small diameter and light weight allows the fisherman to constantly feel the contact with the bait. It is not susceptible to corrosion. Due to the design without the fastener and swivel lure entanglement is minimized. Recommended for fishing twitching style. The #1 has one end sealed, and the #2 – two ends unsealed.

Leader wire for trolling

Manufactured from 7 stainless high-quality steel fibers (Stainless Steel Leader Wire) produced by the American factory AFW, with anti-corrosion coating, applied by anodizing. Combines high strength with small diameter and high elasticity. Recommended for fishing with soft baits and jig head, as well as for fishing with fishing lure.

Victim V-Tail

A long slug with a V-shaped tail, one of the best lure types for catching zander on a drop shot. Although this lure does not have its own action, it responds vividly to any tackle motion you make. Aside from the drop shot, Victim may also be used in other spaced fishing rigs, like carolina rigs. Its specific body shape makes the lure sway from side to side on a jerk, like a minnow, significantly increasing the likelihood of being attacked by a predator. Another rig option is a small triangular jig head. It allows you to fish slightly above the bottom, or in the middle horizon, a kind of pelagic jig. With rhythmic jerks the lure will sort of bounce from side to side. When the conditions require the use of a classic hinged rig, the Victim will be excellent, the key is to use a not too long double so as not to overload the rear part. Then the lure will mimic small fish scurrying at the bottom.

Easy Fat

At first glance, this lure resembles the Easy Shad lure, but it differs from it in its taller and thicker body, as well as a larger tail heel. This made it possible to visually enlarge the lure and make its action very active and wide. As a result the Easy Fat is much more attractive to large pike and zander, both of which can pick up the vibrations from a great distance and gladly attack fleshy prey. Despite the size of this ripper, not big size pikes are also often caught with it. It can be equipped with a jig head, an offset or double hook, or even a stinger with treble hooks according to the fishing conditions.

The Select Easy Fat soft lure doesn't require any special handling techniques; for a successful bite it is enough to guide it evenly or in along the bottom layer sometimes with pauses.

FatFish

Soft lure shad with an elongated shape and covered with soft ribs. During conduct the lure's tail swings extensively from side to side, attracting fish with vibrations. Besides the usual bottom jigging, Fatfish works effectively when dragged along the bottom. The attractive wiggling of the whole body and mud, lifted from the bottom by the jig head, actively attracts the attention of the fish.

Fetish

The entire body of this soft lure shad is covered with soft ribs. They create additional vibrations that attract the fish. During biting the ribs are easily crumpled and start to actively produce flavoring agents contained in silicone. The lure works well not only under usual bottom jigging, but also when dragged along the bottom. Fetish 2" works great with light and ultra-light.

Freek

Grub with a ribbed body and a long voluminous tail. Perfectly selected width of tail and thickness of the material provide for an immediate engagement of the grub in the work, regardless of the conduct phase, tossing or free fall. Freek is versatile in use, it can be applied to fish all species of predatory fish. Varying mounting options depend solely on the fishing conditions – it can be a jig head, as well as an offset or a double hook from a thin wire.

Freek Slim

A twister with an elongated worm-like body that has a distinctive unique action even with the slowest of retrieves. This is achieved through a peculiarly shaped tail that twists at the slightest movement of the rod. The ribbed body adds some windage to the lure for smoother sinking and it is also very flexible, thus helping the soft lure imitate a natural behavior underwater. The best rigs for the Freek Slim are multiple variations of swivel joints on both single (offset) and double hooks. And you don't need to lead only with the classic step, you can also diversify your movements with different jerks and pulls or even drag the lure without lifting it off the bottom.

Boozer

A large soft lure shad with a massive body and a distinctive play for catching predatory fish under various conditions. The geometry of the lure is designed in a way to easily engage in the work, even with a slow conduct and light weight. Boozer is made of new very durable "edible" material, preserving its qualities even in the cold season. This soft lure shad is simple in manipulation, you can conduct it slowly and evenly, using a classic "step" style, or in a swift aggressive jerk style. And the most effective mounting is a hard jig head or a "screw" with a treble hook, as these options allow the bait to fully show itself.

Kraken

Creature with active claws, playing very nicely under even conduct. However, long and smooth pulls with pauses near the bottom and classic animation with sharp short jerks will be the best for this bait. On the pauses, due to wide claws, Kraken will gradually descend to the bottom. Do not neglect the slow dragging of the bait along the bottom. This will be relevant for catching pike at shallow depths. Kraken has a cut in the upper part of the body for offset hook, but sometimes jig-rig mount can also be effective.

Kraken-X

NEW

An updated version of our already well-known Kraken lure. The improved claw design delivers smoother, more responsive action, activating effortlessly even at the slowest retrieve speeds. Limb motion, realistic antennae that lift during pauses, and subtle side legs all work together to create a genuinely lifelike appearance in the water. The lure supports multiple presentation styles, including steady retrieves, mid-water pulls, and bottom dragging. One of the most effective techniques is a smooth, wave-like lift-and-pause pattern that closely mimics the behavior of crayfish and other crustaceans. Suitable for nearly all predatory fish, Kraken-X is especially effective during crayfish molting season. It's also extremely rig-friendly—performing perfectly on jig heads, hinged rigs, offset hooks, jig-rigs, and separated rigs.

Snack

A worm that has a very voluminous ribbed tail, which, due to the large number of segments, has a very realistic wobbling under conduct. The specific feature of this bait is that the body structure allows it to hold air bubbles in its deep ribs, they raise the tail of the lure almost vertically at a pause. The most efficient mounting for the Snack lure is a swivel with a single or offset hook. It is also possible to use relatively short double hook, preferably not out of a very thick wire, so as not to interfere with the movement of the worm. The fore part of the lure is very wide, basically preventing its "breaking" when placing it on a double hook, at the same time it makes it easier to use mounts with a screw. The main trophies of this lure are perch and zander of different sizes. Therefore, do not forget about such montages as "dropshot" and carolina rig. The body of the lure has a special slot to keep the sting of the offset hook safe from roots during fishing in "challenging" places.

Snack-X

NEW

A compact variation of the classic Snack soft lure. The lure retains its bulky ribbed body, now paired with a twister-style tail. Unlike standard twisters, this version responds better to the slower, controlled presentations used for passive soft baits. The tail's subtle movement during pauses often acts as a trigger for passive fish, making the lure especially effective in low-activity conditions.

Javik

The lure is manufactured from edible material. The elongated body with thin partitions moves attractively along the bottom upon jerk style conduct, imitating an insect. It works great with hinged mounts with a single or an offset hook. If you prefer to fish on the carolina rig or drop-shot, Javik will feel itself great in these types of fishing too.

Tsunik

Ultralight lure, made of soft edible silicone. It has a unique play due to the thickening on the tip of the tail. It is advisable to equip the bait with a light hardware. If you want to appreciate the advantages of Tsunik, it is important to ensure it takes a vertical position at the bottom. Besides the classic predators, non-predator fish also bites this bait.

Jarvis

NEW

This silicone micro lure is designed for maximum effectiveness in nano- and micro-jig fishing, as well as in various separated rigs. Jarvis features a worm-like profile – a key forage item for perch and many whitefish species – which gives it strong versatility when conditions are challenging or fish are inactive. Its thin, flexible body reacts instantly to small rod-tip movements, while the buoyant tail keeps subtle motion during the pause, encouraging fish to bite. The lure shows its best performance with the lightest single or offset hooks.

Toxic

A bait for perch fishing enthusiasts. Even conduct will not show the desired results, but various jerks and pulls near the bottom will work out perfectly. At a pause, after one of the "steps", the legs need some time to return to its original position, it is at this moment that perch usually bite. Works also good when dragged along the bottom. Best mounting – hinged, classic or jig-rig. If you fish with the heavy cheb sinker, you can comfortably fish more deep places in search of zander.

AspMaster

NEW

The AspMaster is a spoon lure designed for targeting asp and other active predatory fish. Its aerodynamic shape, balanced weight, and stable action allow for ultra-long casts and effective presentation even under low activity conditions. Available in three weight options, it adapts well to different fishing scenarios. The lure performs effectively on both twitching and steady retrieves, producing a vivid action that triggers aggressive strikes. AspMaster comes in a wide selection of colors – from classic metallic finishes to bright UV combinations – making it easy to match water clarity and light conditions.

Grandex

A versatile and easy to use spoon for catching predatory fish. It has a strongly pronounced performance and doesn't require any specific guiding technique. At slow speed the sway amplitude slightly decreases and the lure sinks deeper, while at higher speeds it sways broadly, but does not spin, and only sometimes gets off track, which is often a decisive factor for a predator to attack. This lure is great for finding active pike and other predatory fish in both stagnant water and in moderate currents.

ProAtom

A spoon of a highly popular shape, often used for pike fishing. With its unique play on a steady guidance it performs great not only with pike, but also with other predatory fish. In order to succeed it is enough to guide the lure at an average pace, and it will deliver results consistently. Nevertheless, the addition of pauses and various jerks will contribute to the play and increase the number of bites.

ProAtom Noiser

Select Noiser is based on the ProAtom spoon lure, maintaining its shape and distinctive fish-attracting motion. What sets it apart is its dual-blade design, where two components are connected by rings. This additional noise effect attracts predatory fish and provokes them to strike.

Solver

A spoon specialized for pike fishing in shallow waters partially overgrown with grass. Thanks to a well-thought-out balance between the shape, metal thickness and lure dimensions, it demonstrates unique properties for fishing in difficult conditions. The moderate windage of the lure allows it to be slowly guided over the weeds, and at the same time it flies rather well when cast. This spoon has a unique game that attracts pike of any size: from a tiny "jack" to large trophy specimens.

Rival

NEW

A unique micro spoon designed for precise control and a natural lure action. Its thin brass body perfectly transmits vibrations, even at the slowest retrieves. This makes Rival ideal for trout fishing, as well as for targeting chub, ide, perch, and pike in rivers and lakes. The spoon remains stable at any retrieve speed—from ultra-slow to fast, with jerks. The smaller size works best for cautious fish or delicate near-surface presentations. The medium size is a versatile choice for various conditions, while the largest Rival is better suited for long-distance casts and deeper areas. This micro spoon can be confidently used even in competitions, where precision of movement and natural action are key. The color range is developed for universal use—with options for both bright, sunny days and overcast weather. Thanks to the variety of contrasts, it's easy to find an effective combination for different water temperatures, transparency, or fish activity levels.

Supreme

NEW

This is a true classic of ultralight spinning for small rivers. The spoon stands out for its stable action and versatility. Made of brass, it offers a perfect balance of weight, profile, and smooth oscillation. Thanks to this, Supreme maintains steady performance even at slow retrieves and doesn't "roll over" in the current. This micro spoon works perfectly for wild river fish such as chub, perch, ide, pike, and asp. In the flow, it produces a distinct yet soft action that triggers both passive and active predatory fish. It can also be successfully used for trout fishing in ponds. The color range has been carefully selected by experts for various conditions – from clear mountain streams to muddy waters after rainstorms. The lineup includes both natural tones for cautious fish and bright, high-contrast combinations for active search or competitions.

Welldy

NEW

A refined micro spoon created for precise and delicate fishing. Its elongated brass body offers a perfectly balanced shape – the lure starts instantly, stays stable, and keeps a smooth, steady action even at the slowest retrieves. It comes in two weight options while maintaining the same compact size. Thanks to its unique profile, Welldy performs confidently even when the current changes direction or during light pauses and subtle twitches. It's especially effective in calm waters, where regular spoons tend to lose stability. Versatile and responsive, it works great for perch, chub, ide, asp, small pike, and trout. Welldy often provokes strikes when other lures fail. The color palette is carefully designed for different water types and fishing conditions.

Heli-X

The perfect spinner for fishing in the current. The fry shaped core is made out of heavy metal and has an asymmetrical shape, thus the lure holds the current well and can be cast quite far. Instead of the front loop, a swivel is installed on the lure's axis, which, together with the asymmetrical core, minimizes the twisting of the braid during fishing. The blade has a textured surface resembling fish scales and creating additional attractive light reflections in the water. Due to the design of this spinner, it can be used not only in the current: The Heli-X engages quickly into action even in stagnant water, and it can also be operated at a fairly slow speed – something that a passive predator will find very appealing. The main targets of this spinner are perch, pike, chub, asp and ide, as well as trout and grayling, should they be present in the waters you fish.

Sonic

This innovative lure combines the features of a spinner, pilker, and rattling bait, creating a truly unique design unlike anything else. Its heavy, compact lead body, shaped like a fish, ensures exceptional casting distance, even in challenging headwinds or sidewinds. Equipped with a drop-shaped blade mounted on a bearing swivel, the tail spinner offers effortless activation and reliable performance. The Sonic is best described as a bottom spinner, as it excels in targeting fish near the bottom. Another key benefit is its design, which prevents line twisting entirely. This lure is most effective from late spring through late fall, with perch being the primary target. However, it's also highly effective for catching zander, asp, and other fish species.

Messer

NEW

Select Messer is a minnow-type lure with a flatter body shape, resembling the profile of shad lures. This design feature gives the lure a more unique action compared to classic minnows. Its primary targets are pike and perch. The lure is forgiving in terms of retrieval technique and compensates for many mistakes, making it a versatile choice for both experienced anglers and beginners. Select Messer delivers excellent results with steady retrieves, smooth pulls, and sharp, aggressive twitching. During pauses, the lure suspends in the water column. It is equipped with a long-cast system that not only enhances casting distance but also stabilizes the lure's body in flight.

Prank

NEW

Select Prank is a small crankbait designed for catching chub and other river predators such as perch, pike, and asp. The lure has a distinct, stable action both in still water and current. Thanks to its streamlined shape, this lure offers excellent casting performance.

Coward

NEW

Sinking lipless crankbait features an internal rattle chamber that generates strong vibrations and sound waves, effectively attracting fish from a distance. Its compact body and tall profile ensure a stable action during steady retrieves. Ideal for fishing at depths of up to 4-5 meters. Target species include perch, pike, zander, and active asp. Works great for both shore and boat fishing.

Flash

A small classic walker for perch and asp. Easy to manipulate, moves effortlessly from side to side, causing zigzags on the water surface. You can use two leading styles: medium-fast – wobbler will rotate smoothly and produce broad turns, and fast – walker will produce very sharp turns more or less at a same spot. With Flash you can successfully fish both on rivers, and on lakes. Often an active predator can be found on the spits and shallow waters, and it is worth fishing in the areas with grass. You can also use walker, if within the casting range you can see splashes of fry on the surface of the water. Just throw the bait there and the attack of a perch or other predator will not make you wait long.

Splash

This popper can make your fishing trip very dynamic, emotional and unforgettable. It's great for attracting active perch, and it will also be good for catching pike amidst waterlilies. In the leading process, besides the splashes, the wobbler also splatters distinctively, additionally attracting a predator. Unlike the walker this lure can work the promising area more thoroughly. The popper gets attacked most often during the pause after a series of splatters with splashes. However, Splash also knows how to make walker-like zigzags. And this significantly increases the variety of conduct styles for its animation. Thanks to its streamlined shape and notable weight, the bait flies wonderfully.

Sprint

Miniature ultra-light crank. Offers a lot of applications, but its main focus is fishing for chub in small rivers. Wobbler holds the current and the given horizon well, and the color map was made with an emphasis on the strong and vivid fish. Except for the white predator, expect to meet a small perch or other small pike. And if you are fishing in the riffles of mountain rivers, trout will also appreciate this bait. The Sprint is a suspender, providing more options for animation. In addition to the basic even conduct you can use a light twitching with small pauses. Such manipulation can provoke even a passive predator to attack.

Drastic

This minnow can catch practically all our local predators: perch, pike, asp, chub, ide, and even trout. Wobbler works wonderfully in standing waters and in moderate currents. It has a distinctive play, making it possible to successfully operate it in even conduction. But, nevertheless, the most effective manipulation for this type is, of course, twitching. During jerks Drastick imitates a wounded fry, but at intervals hovers wobbling in the water, it is at these moments the predator most frequently attacks a weakened fish. The bait is equipped with a magnetic system of distant casting, making it possible to maximize effective fishing in the area. Map of colors for this model is selected so that you can easily find the desired color for any fish.

Hamster

A kind of “chubby” minnow with an active play and easy manipulation. It twitches well under jerks of varying intensity, and during pauses it floats attractively in the midst of water, provoking a bite. The working horizon of the lure is limited to depths of up to 1 meter, so it is most effective in shallow waters, along aquatic vegetation or near shallow spits. Inside the lure is a magnetic long casting system, which, together with the aerodynamic shape of the lure, allows for great range and precision. The lure is equipped with high-quality BKK hooks distinguished by their sharpness and excellent strength.

Reflex

It is essential that the angler's arsenal, apart from the minnow wobblers, should also include shads. Under certain conditions, this type can catch significantly better than the twitching minnows. Everything depends on what the predator feeds on at the moment. At steady conduct Reflex has a non-extensive play with frequent fluctuations. Therefore, the best leading style will be "stop and go" or short jerks with pauses. A gentle twitching makes the bait similar to a fidgety fish, realistically shimmering on the sides. That is why the pike reacts very willingly to this bait. In local conditions, the primary place for use are various types of shallow waters, reedbeds, old rivers, small streams and reservoirs, as well as small rivers with a moderate current. The Reflex is equipped with a magnet system for farther and more precise casting.

Insider

This is probably the most versatile twitch type wobbler for pike. On jerks Insider chaotically moves from side to side, sometimes rotating by 180°. He is simple in the manipulation and works well at any pace of jerk style conduction, both with aggressive and gentle twitching. It has excellent casting characteristics, not only because of the elongated compact shape, but also because of the far casting system. The Insider is a suspender, it hovers in the water at a break and keeps nearly horizontal position. Apart from pike, perch of various sizes react well to this type of bait. The main places of application of the Insider are small ponds and ditches with a depth of 1.5-3 meters, and it is desirable that there is grass nearby. And size 90 is also suitable for zander fishing in the night on shallow water spits and in the coastal waters. This model is available in two sizes: 90SP and 110SP.

Dementor

Wobbler, that easily and confidently provokes the predator to attack, is good for fishing in the wide areas of water reservoirs, as well as on small rivers or lakes. At a steady lead Dementor has its own pronounced play, but for greater efficiency it is better to use twitching. When jerked moves in different directions, the sides are convulsively flickering, like a wounded fish, and at a pause hovers in the water. It is at this moment that the attack occurs most often. The Dementor does not always need an aggressive and sharp twitch, sometimes short, easy jerks with very long pauses are more effective. This animation is able to attract a pike even from significant depths. The Dementor has three metal balls inside, shifting from the working position towards the tail while casting, thus changing the center of the weight. This makes the wobbler fly well and is very suitable for fishing in large bodies of water. During the conduction of the lure, the balls produce the effect of the rattle, which makes the lure even more noticeable in the water.

Hustler

A large lure for pike fishing. Still, despite its size, it confidently attracts both large and small fish up to 1 kg. The lure has a unique flat shape resulting in a distinctive play. With a straightforward, even retrieve it actively rolls from side to side, while its most attractive action occurs during twitching: going to the sides and floating in one place with swaying sideways. To improve the flyability of the lure it is equipped with a long cast system that, despite the lure's windage, stabilizes it in the air and ensures it flies to a desired spot. The Select Hustler is equipped with high-quality BKK treble hooks with power sufficient to land large fish.

Basher

Deepwater trolling lure for pike, zander and catfish. However, the lure has good aerodynamic characteristics, so it is also suitable for casting into deep water areas while fishing from a boat. This lure has a wide-ranging play with transverse sway along its axis, thus creating vibrations that attract fish from a long distance and provoking them to attack. A noise chamber inside the lure makes it easier for predators to detect it at greater depths and in poor visibility. Sharp and strong BKK hooks are good at hooking the trophy and firmly securing it even during long retrieves from a great distance.

Diver

A highly popular lure among anglers who prefer to catch predators trolling from a boat. It has a decent sinkage thanks to its long and wide body, thus making it perfect for fishing deeper waters where large fish live. The best way to retrieve this wobbler is to guide it evenly, so that it performs smooth vibrations in the water mass, and adding slight pulls or occasional contact with the bottom provokes the predator to attack. There is a noise chamber inside the lure helping fish spot it faster at great depths. High-quality BKK hooks distinguished by their sharpness and strength guarantee successful bites and minimize the number of trophy escapes. The Select Diver is applicable for catching almost any predator that lives at great depths, the main ones being pike, zander and catfish.

Regent

This lure is used for deep water fishing. It is thin and heavy, so it flies far when cast, sinks quickly and holds the horizon well during retrieval. The lure has a striking vibration both during even guidance and with jerks, moreover, when paused it sinks erratically resembling the behavior of a wounded fry. That's how it provokes a predator to attack. The Regent Vib is perfect for catching pike, zander and catfish on the bottom using jigging action, and its use is not limited to boat fishing, it can also be effective in winter during vertical ice fishing.

WH-110

A series of offset hooks with a wide bend and a point directed towards the center. This shape is perfect for grubs and small soft lure shads. The specific feature of this model is an enlarged diameter of the eye, due to which the offset moves freely on the sinker regardless of the thickness of the wire used, and can also be fastened through the guiding ring. WH-110 is suitable for pike, perch, zander and other local waters predator fish fishing.

WH-190

Offset hook of versatile shape. Due to the use of a smaller diameter wire, it allows the lure to move more naturally under water, pierces the fish easier and at a high pressure can unbend, thus avoiding loss of the whole tackle. Nevertheless, its strength is sufficient to firmly hold a large fish. The WH-190 are manufactured from high-carbon steel and have a laser sharpened point.

TWH-22L

When creating this hook, we considered many subtle aspects essential for the attack of a predator. This includes the sting sharpness and the well-formed barb, both critical for a secure hooking and fish retention. The wire is of optimal thickness: relatively thin and elastic for easy installation, but sturdy enough not to bend during reeling. We also took into consideration the length of the shank for each specific size, so that the sting comes out of the lure at the proper distance when attacked. Another distinctive feature of this double is the shape of the eye. It is somewhat narrowed and elongated, so when installed, it passes easily through a small thin bait and does not tear it from the inside. The size range (#12 – #6/0) will allow you to choose the perfect size of the double for both micro jig lures and large soft lures for pikes.

DH-22L

Model with an increased shank length, intended for the installation of soft lures. The double hooks are made of high strength carbon steel, have a laser sharpened point and a sufficient capacity for holding large fish. The double oxidized coating of the hooks protects them from oxidation even during constant use. The DH-22L is ideal for fishing with soft lures and jig head for pike, zander, perch and catfish.

TH-36

The treble hooks are made of high-carbon Japanese steel with the use of zonal forging and cryogenic hardening. Thus, it was possible to increase the toughness of the point and significantly reduce the brittleness of the shank. A double oxidation protects against corrosion and prolongs the service time of the hooks. The TH-36RD comes in red.

“Vuhastyk” Ball Sinker

The Select “Vukhastyk” jig head is designed for rigging soft lures in jig fishing. Its split construction allows quick weight changes without using split rings. Made from resilient steel wire, it resists bending even when fighting strong fish. The wide range of weights in the Select Vukhastyk series lets you choose the perfect option for any fishing conditions.

Tungsten Jig Rig Tear Drop & Stick

Specific tungsten jig rigs that have become quite popular among fishing sportsmen. The core advantage of this tackle is the specific bait delivery and the ability to quickly replace it. Unlike lead sinkers, tungsten is denser, has a smaller volume and, accordingly, flies further. It is also more sonorous, which simplifies the control of the retrieve.

Tungsten Sinker “Cheburashka”

Serves for equipping soft and other jig baits for predatory fish hunting. Tungsten ball sinker is made of tungsten, which has a greater net weight and increased firmness in comparison with their lead counterparts. At the same mass it has smaller dimensions, which in turn affects the throwing range and the speed of sinking into the water.

Extractor

Typically used by spinning rod fishermen to safely remove the hook from the fish's mouth. It allows to avoid hands tearing against the teeth of pike if the fish has grasped the bait deeply, and gently detach the hook without harming the trophy. Made of durable high-carbon steel with soft anti-slit linings on the handles. Special toothed lock allows to secure the hook reliably during removal.

SL-YP05	162x53	18703870	4823102117072

MFP-02 Pliers

These fishing pliers will make it easy to work with the smallest of split rings, and will also be useful if you need to remove the hook from the mouth of a fish. The pliers are made of strong and durable stainless steel and have practical, anatomically shaped handles which can be secured for the period when the tool is not in use. Also may act as a wire cutter.

Model	Length, mm	Code	EAN-13
Pliers MFP-02	178	18707094	4823102117034

SL-YP09 Pliers

First and foremost, these are classic high-carbon steel pliers with a retracted working part for effortless hook extraction from the fish's mouth. There is a special hook at the end to unclench the split rings, allowing you to easily replace the treble hook on the bait. Also function as a clipper and have a gadgets for crimp tubes fixation for self-made wire leads. The spring-loaded handles can easily be operated with one hand and are equipped with ergonomic pads made of non-slip rubber.

Model	Length, mm	Code	EAN-13
SL-YP09	125x47	18703871	4823102117096

Retriever

Plastic retriever with aluminum carabiner on one end and a ring on the other will help secure the equipment to your belt, bag or boat. Perfect for attaching pliers, lipgrip, extractor, or other fishing tools.

Model	Length, mm	Code	EAN-13
SL-RCR	220 – 1200	18703874	4823102117126

Magnet with carabiner

A small but very useful fishing tool. It makes it easy to attach pliers, lipgrip, extractor, scales, or other fishing tools to a bag or a belt. The maximum load the magnet can bear may reach up to 4 kg.

Landing Net & Net Head

NEW

The Select Rubber Landing Net with a rubberized mesh is a practical and affordable tool for fishing from the bank or from a boat. The rubber mesh is more fish-friendly and widely used by European anglers. The model features a one-piece handle and a plastic head joint. The Select Rubber Net Head comes with a classic threaded mount, making it compatible with any handle with a threaded insert and suitable for landing large trophy fish. It works well on platforms, small inflatable boats, and during shore fishing for predatory fish.

Reversible Box

A box for convenient storing and transporting minnows. The double-sided design and triangle compartments allow a large number of baits to be stored in the box. Moreover, treble hooks fit in a specialized socket and do not scuff the coating of the minnows. It has ventilation holes through which the moisture accumulated after fishing will evaporate preventing oxidation of the hooks. Reversible is made of durable and elastic plastic, equipped with reliable lockers.

Tackle Box

The Select Tackle Box is designed for transporting and storing fishing tackle and accessories. Its fold-out shelf construction allows larger items—such as a small reel or spool of fishing line—to be stored in the main tray, while the upper compartments are suitable for organizing lures, sinkers, and other rigging components. The box is made of plastic that is resistant to minor impacts and scratches, ensuring long-lasting use with proper care. The hinged lid is secured with rotating joints and a reliable latch that prevents accidental opening. A rotating handle on the top makes the box easy to carry.

Waist Box

A handy waist box for spin fishing, attached to the waist with a belt. It is a perfect choice for light and ultralight fishing or wading anglers. The box has an anatomical smooth curve to fit the body and does not restrict the angler's movements. It has two main compartments with lids for different types of lures or small accessories. There are also two small compartments for leashes, hooks or clasps in the lid of the box.

Folding Bakkan bag

The Folding Bakkan can be used for any kind of fishing to store and carry tackle, gear, accessories, or even bait and ground-bait. Made of EVA material with sealed seams, it is extremely durable and reliable, waterproof and is easy to clean. This design protects the contents of the bag from getting wet in the rain, and makes it safe to place the bag on wet ground. The bakkan has one spacious compartment, and the lid is closed with a reinforced oversized zipper. There is also a scale on the lid to assist in measuring the length of the leash or the caught fish. The bag is equipped with an adjustable shoulder strap for easy carrying. When the bag is not needed, the elasticity of the material allows it to be folded compactly.

Semi hard rod case

The case has a semi-rigid body with a plastic insert covered with durable synthetic fabric. A full-length zipper makes it easy to stow your rods inside. A protective cap is installed at the bottom to further protect the tackle, prolong the durability of the fabric and allow you to safely place the case on any ground. The front side is decorated with high-quality brand logo embroidery. The case can be carried by the handle or on the shoulder with the help of a wide adjustable strap.

Sunglasses

The polarized Select sunglasses are a perfect combination of modern style and sun protection. The UV 400 lenses fully protect your eyes from harmful ultraviolet radiation, while the anti-reflective properties enhance your visibility below the water surface. Some eyewear models have ASL coating, making the surface of the lenses more resistant to scratches and thus extending their service life. The design matches beautifully with fishing equipment, and a wide range of frame shapes and colors offers a perfect fit for every angler. The majority of models come with a lens cleaning cloth and a hard case with a carabiner.

* floating models ** have ASL coating *** models without a case

Pike SL-PK II Glove

Select Pike SL-PK Glove – a specialized fishing glove designed for comfortable and safe handling of fish when removing them from the water, as well as securely gripping them while releasing a lure. Additionally, this accessory can be used for pulling up an anchor, which is especially convenient in cooler weather. The glove features a durable fabric base with an outer rubberized layer that protects your hand from getting wet and, to some extent, from cuts caused by pike teeth. It is equipped with a magnetic glove clip, allowing it to be attached to a belt and always kept within reach.

Towel

During fishing day a hand towel is often used to dry hands after contact with fish or water. The towel has a loop with a clip for easy attachment to a belt or some kind of gear. The towel features a spacious pocket enabling you to wipe your hand on both sides in one quick motion. It is made of synthetic Microfiber material that is highly absorbent, dries quickly and is easy to care for.

Hats

Select hats are soft and comfortable headwear designed for the cold season. They are suitable not only for fishing, but also for everyday wear in the city, hiking, sports, and walks. The dense knit, with some versions featuring a wide brim, provides excellent protection from the cold. High-quality synthetic yarn ensures excellent heat retention, wear resistance, and durability.

Caps

The Select cap is a classic summer headwear item featuring the manufacturer's logo. It is made of synthetic or natural fabrics that do not fade in the sun, are easy to clean, and retain their appearance over time. There may be a mesh at the back for additional ventilation. A sizing system is provided to adjust the cap to the user's specific parameters.

Bucket hats

The Select bucket hat is a popular type of headwear that provides effective sun protection. The brim of the bucket hat protects the wearer's face and neck from all sides. This headwear is very comfortable to wear while fishing, hiking, or during everyday activities on hot, sunny, and calm days. The Select bucket hat is decorated with the brand's logo, which may reflect the owner's interest in spinning fishing.
